# Powering recruitment and relationship management for personalized medicine research

The future of medicine is patient-centric and data-driven, and we're making it possible.

Join us in this journey.

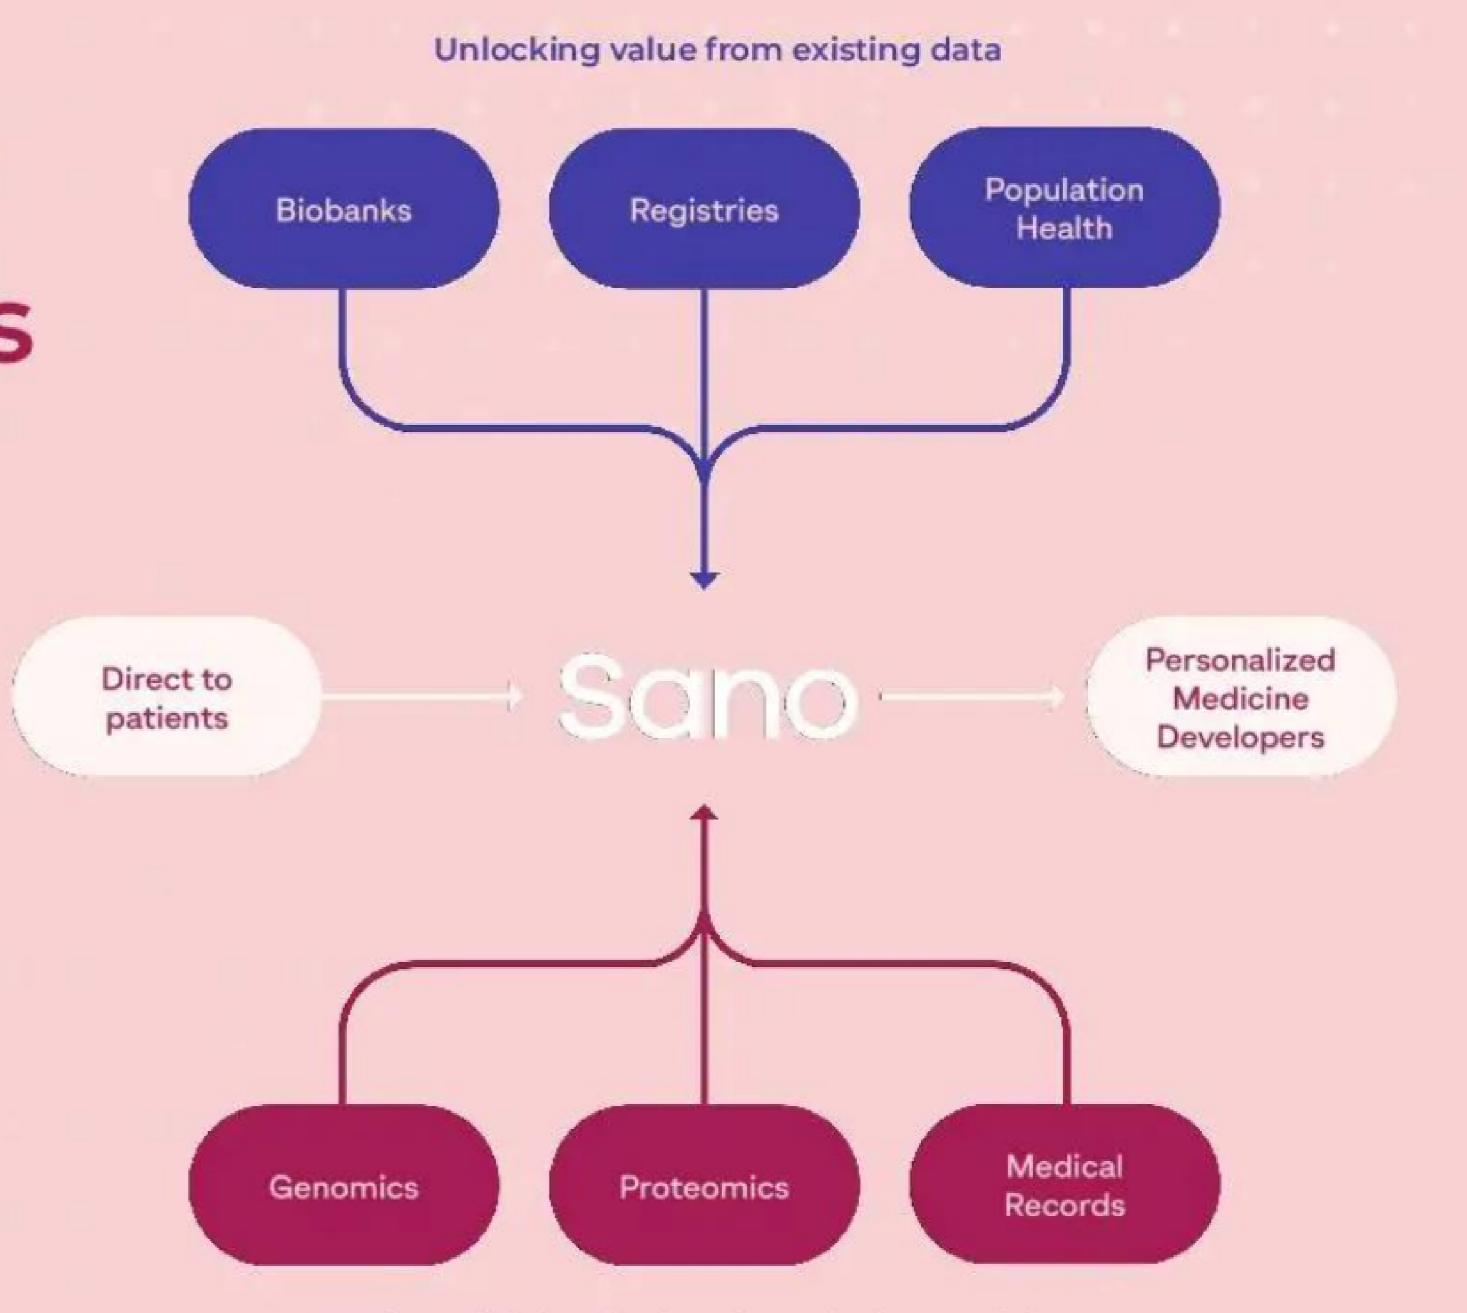

# Personalized medicines are on-track to surpass non-personalized medicines in the next 5 years.

- Personalized medicine is about tailoring treatments using data, and there is a revolution happening.
- This is a \$1T opportunity, but radical changes are needed.

## But the existing infrastructure was built in the 1980s.

- 80% of clinical trials are delayed, costing \$600k- \$8M per drug per day to pharma companies.
- This is because:
  - Data is fragmented, resulting in huge time and cost inefficiencies.
  - Cost-plus and time and materials business models further add to the inefficiency.

Our vision is to enable personalized medicine developers to digitally access >1 billion people with rich -omics and medical data.

## We have significant traction and have reached several inflection points

- Doubling revenue every 6 months.
- Our software has been adopted by population-scale genetic biobanks and pharma in the US, UK, Australia
- >1.1M people in our genetic data network.
- Our platform has powered 20+ personalized medicine research programmes including:
  - o Parkinson's Disease
  - Alzheimer's Disease
  - Ulcerative Colitis
  - Long COVID
- 83% of Sano users would recommend Sano to family and friends

### Sano uniquely connects three key parts of the market.

### Patients use our platform to match with potentially life-changing personalized medicine research.

83% of Sano users said they would be likely to recommend Sano to family and friends

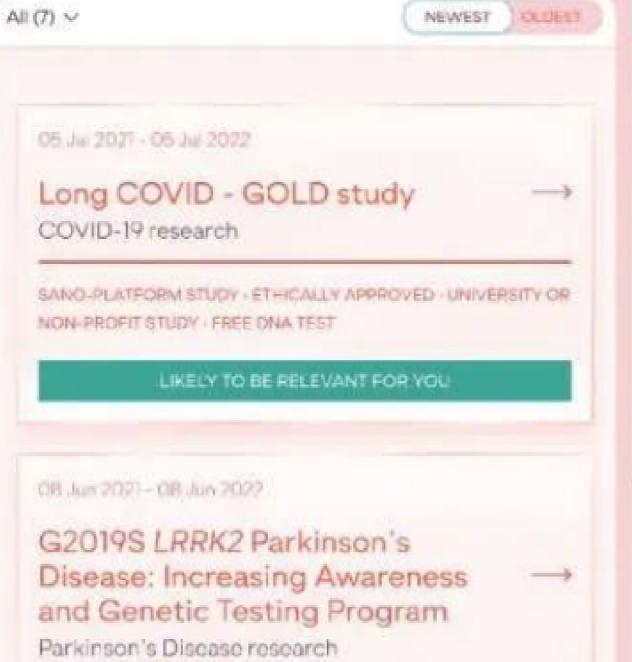

Private-by-design approach puts users in control of their data.

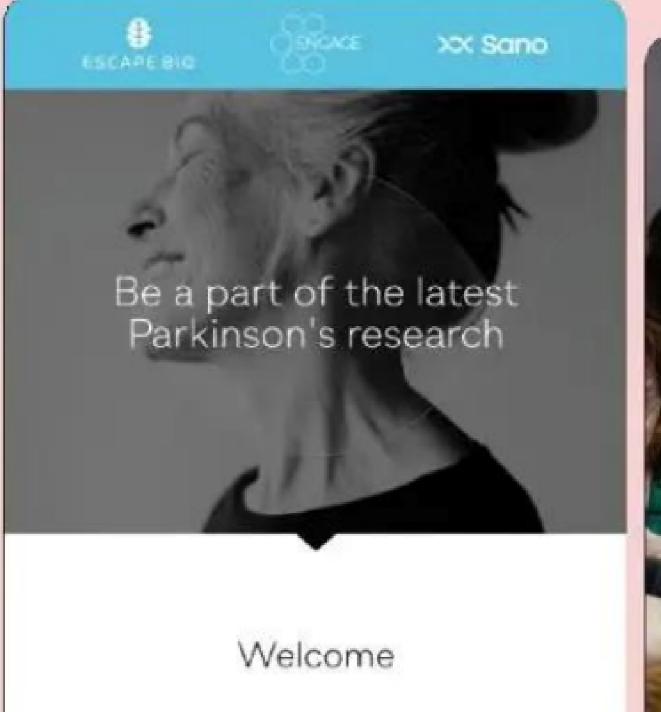

### Genetics and the acceleration of knowledge.

Genetic testing has revolutionised the way that individuals with rare and inherited diseases can be...

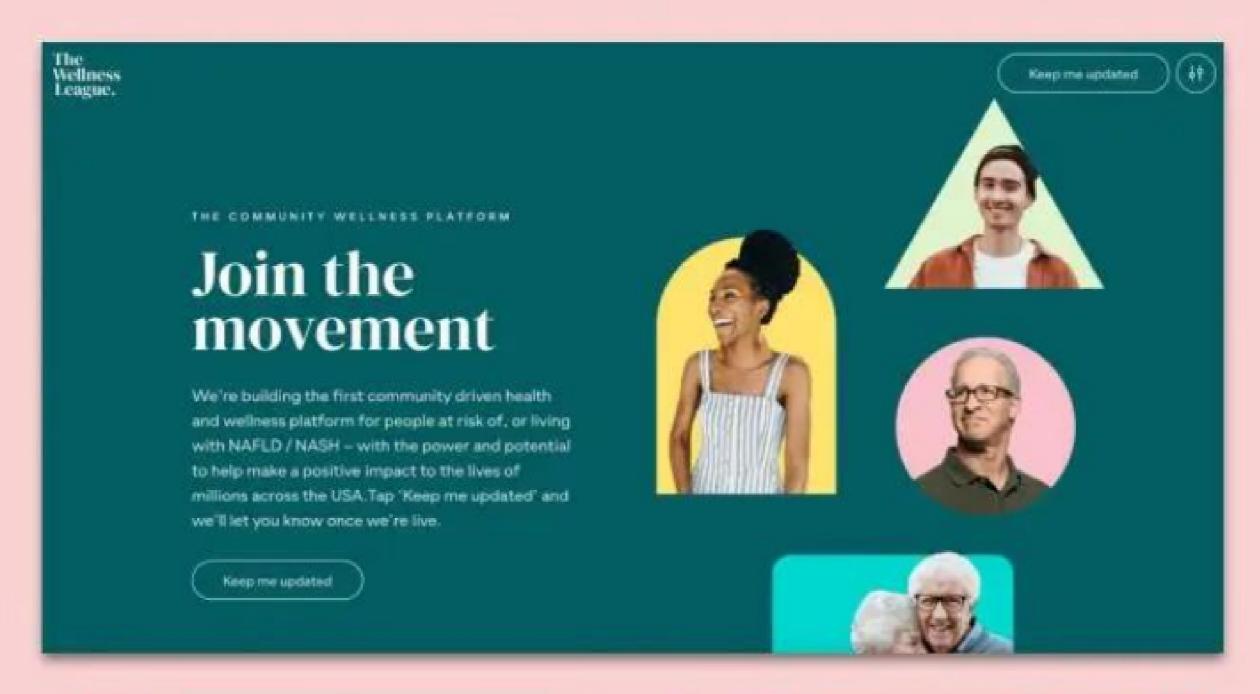

# Biobanks and registries use Sano to deliver a superior user experience and generate revenue.

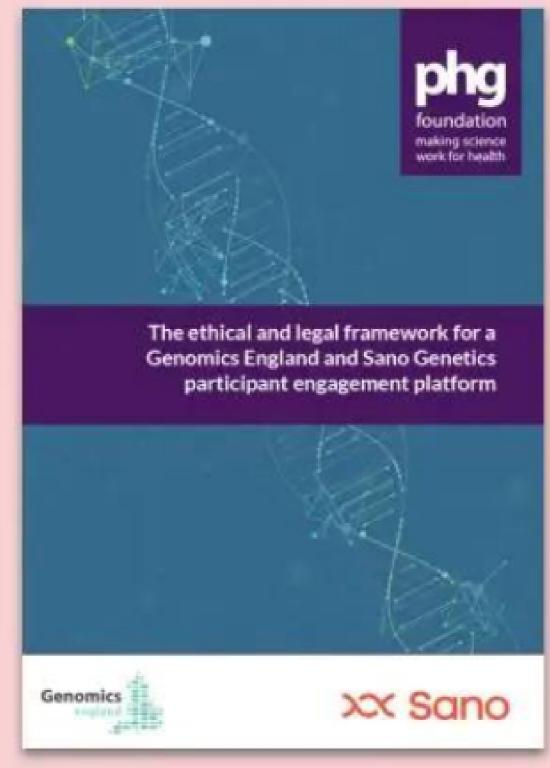

We have already partnered with leading patient registries and population-scale biobanks in the US, UK, and Australia.

Governments, non-profits, and the private sector are accelerating investment in genomics, spending billions per year generating new datasets.

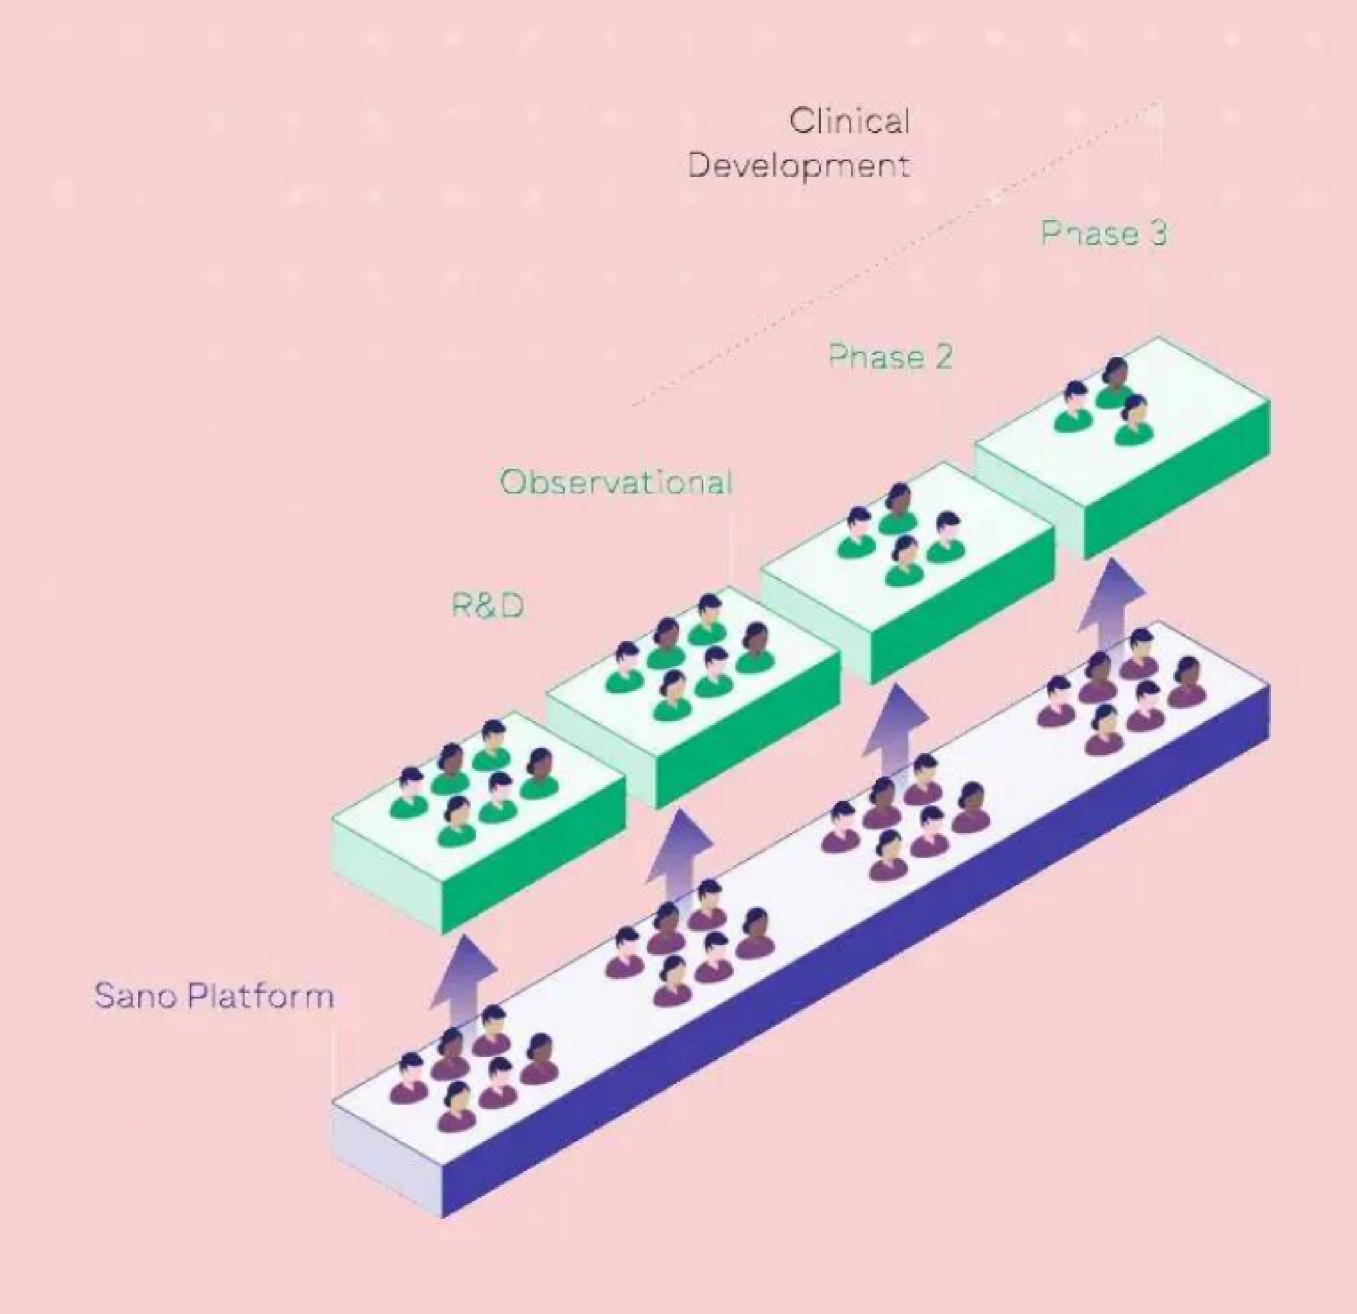

### Biotech and pharma clients use Sano to find the right patients and unify their journey

### Our business model:

- Monthly recurring revenue for the platform
- Volume and performance-based revenue for DNA testing and recruitment, leveraging our extensive partner network
- Revenue-share with patient registries and biobanks that opt into our partner network

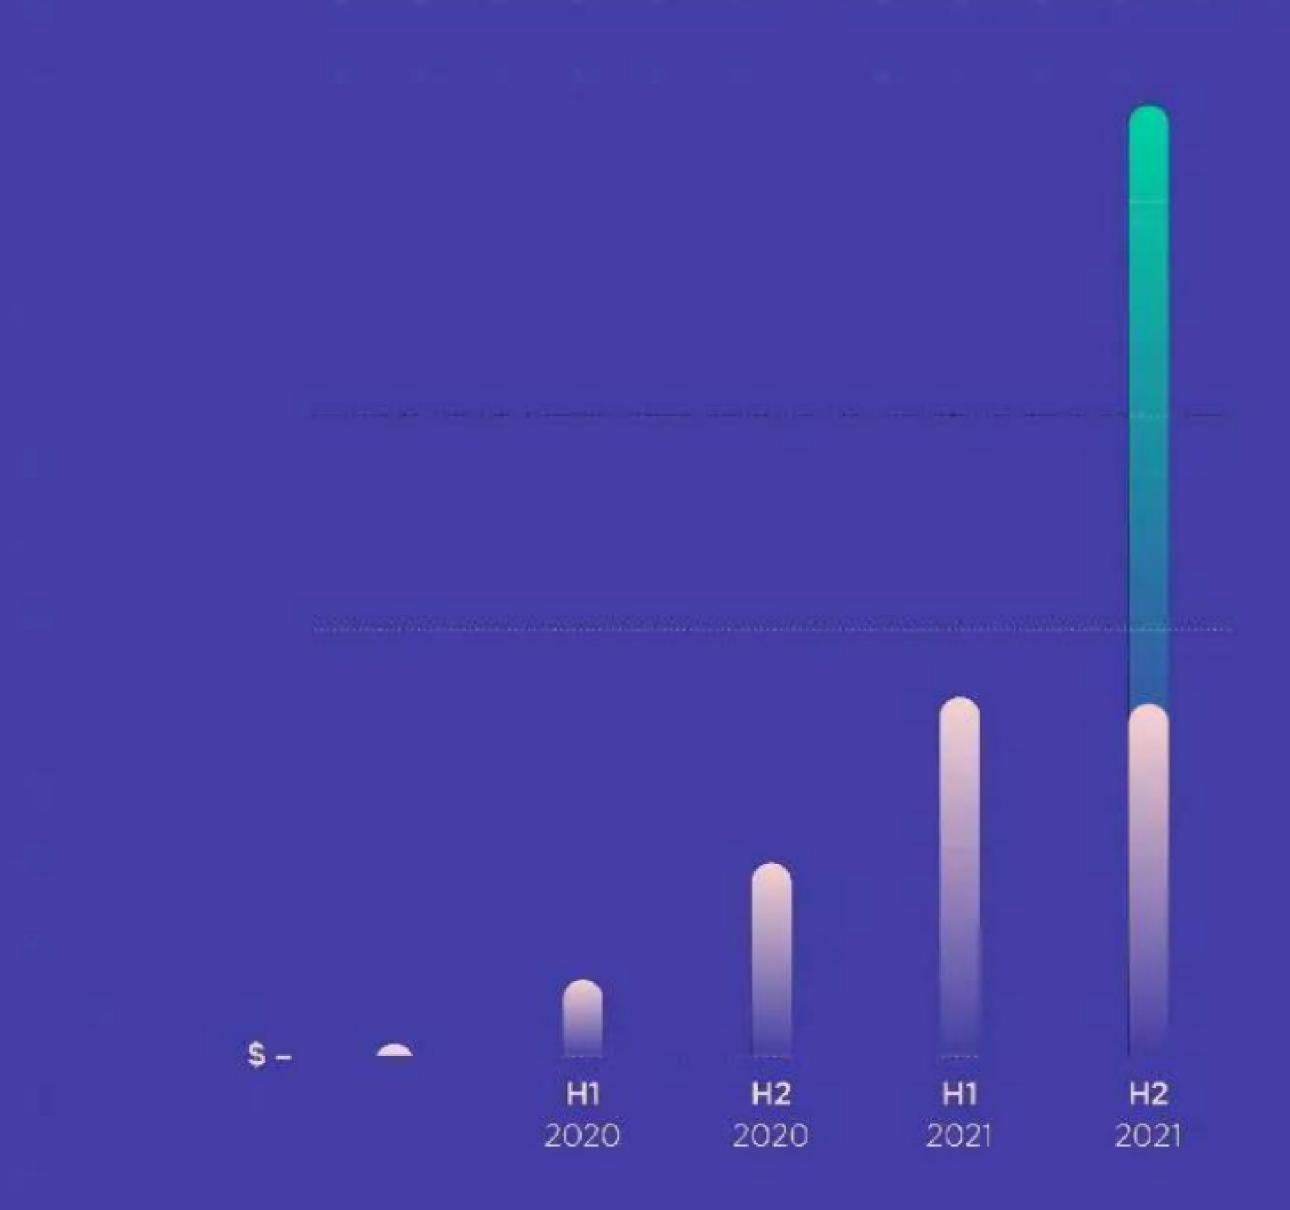

### We are doubling revenue every 6 months

### We have shown:

- Strong customer retention and expansion
- A repeatable sales playbook
- Positive unit economics

Revenue - actual

Revenue - projected

### We have built an exceptional team of experts in the space.

Executive Team

Patrick Short
CEO & Co-founder
Sanger Institute, Cambridge

Charlotte Guzzo

COO & Co-founder

JP Morgan, Cambridge

William Jones
CTO & Co-founder
EBI, Cambridge

Mike Allen
Head of Product
Push Doctor, GSK

6x - Tech

3x - Commercial

2x - Operations

2x - Product

We are a team of 20 today including:

5x - Marketing and Partnerships

2x - Project management

Lauren Wong
Head of Marketing
Hello Fresh

Liam Eves
Head of Precision Enrolment
hVIVO

## We are raising \$11M to scale to meet demand and transform this trillion dollar market

### We will use the funding to:

- Grow our team in the US and Europe, tripling revenue year over year.
- Sign at least one flagship partner in each of our six key international markets.
- Develop the platform to meet demand in 50+ diseases and 6+ countries by mid 2023 and raise a Series B to further accelerate our growth.

### xx Sano
